

# Phased Approach

## Digital AND Paper

Because Freeway has been developed over decades – preceding the invention of tablets and smart-phones we have interfaces that can and do work on paper, and we know what is involved in the efficient production and processing of turnaround documents.

This means that implementing Freeway does not necessarily mean 100% immediate digitisation of ALL processes. Where there are specific technical, organisational and HR considerations digital processes can be phased in with ‘mix and match’ of some paper and some digital. This can be on a process by process basis - for example our tankers customers cannot use electronic devices on the workshop floor, but can use tablets in the stores.

This can also be on a location basis - for example digitising in a lead workshop can prove the efficacy of moving away from paper before rolling out to other workshops. We also have some customers where some individuals work on electronic job-cards and time-sheets while other users continue on paper.

In these environments we usually find that the paper-based users migrate themselves to the digital method when they see their colleagues spending no time on paperwork.

Process	Digital	Paper with retrospective capture
Driver Checks	✓	✓
Engineering Inspection	✓	✓
Stock Takes	✓	✓
Job-cards	✓	✓
Timesheets	✓	✓
24 Hour workshop control sheet	✓	✓
Parts Requisition	✓	✓
